Commentary

The EHP Guardian Fund Class "F" units declined -0.3% for the month of August, versus a gain of 0.7% for the TSX Composite and 0.3% for the S&P 500. Equity strategies were essentially flat during the month as losses on shorts offset gains on long positions in a market that continues to favour higher volatility "growth" stocks rather than higher-quality, dividend paying ones. Small losses for the month came from our Credit Momentum strategy which saw us switching from U.S. high yield debt to long-dated U.S. treasuries, only to reverse the position as high yield reversed higher in the last week of the month. While frustrating when trends flip-flop in the short-term, over the long run having a process to reduce risk as markets become more volatile is a critical part of our process of protecting against meaningful drawdowns in the fund.

Momentum and growth stocks continued their ascent during August, while value stocks continued to sell off. Markets did experience a mid-month swoon on the back of geo-political issues which resulted in a temporary flight to safe haven assets and a spike in volatility, however, as has been the case with recent pullbacks, investors used the weakness as a buying opportunity leaving broad markets at, or close to, record highs. In our opinion, the huge outperformance of growth versus value is approaching extreme levels and at some point, investors will come to the realization that by chasing "what has been working", it is only serving to push already expensive valuations on a select number of high growth stocks even higher, to a level that is unjustified by fundamentals. To us, markets appear to be exhibiting "1999-lite" characteristics. We're now seeing analysts and investors looking for new ways to justify otherwise traditionally expensive valuations for unprofitable businesses, including price/sales, EV/revenue, and the "boot-strapping" of valuations for one overpriced stock relative to another. Investors inevitably point to examples that validate this approach, with Amazon being the poster child, as in, "Amazon has always been expensive, and look at it now". Two things to point out with respect to this logic: 1) AMZN lost an incredible 95% of its value from the peak in '99 before bottoming two years later, and 2) for every Amazon, there were hundreds of similar "must own" stocks which either failed completely or have never again reached the levels approached during the last "new paradigm" environment. Amazon is a juggernaut and massively successful, but there is no better reminder that the price that you pay for even massively successful businesses matters in the medium term.

We enter September positioned in much the same way as the last few months – with Canada at the lower end of our risk range, but with U.S. stocks and credit positioned bullishly. The market continues to send mixed signals, with a resurgence in EM currencies and stock markets along with strength in industrial commodities pointing to an environment of growth and reflation, while conversely, safe haven assets like U.S. treasuries and gold are also moving higher, suggesting the opposite backdrop of low growth and limited inflation. With a market that remains narrow in terms of stocks that are holding indices up, and a heavy political schedule for September, we expect more volatility before resolving these conflicting signals. As always, we'll adapt our positioning accordingly as our indicators dictate.

Fund Information

The Fund constructs a long/short portfolio of equities and income-producing securities by buying quality, high yielding, rising stocks and shorting overvalued, declining, volatile stocks. The Fund actively hedges equity and interest rate risk to preserve capital in declining markets or rising interest rate environments. The Fund emphasizes a disciplined process of stock selection, risk control and liquidity. The Fund targets annual returns of 6-8% inclusive of its cash distribution and net of all fees.
