### Commentary

The EHP Advantage International Fund Class “F” units increased +3.8% for the month of March. Returns came from both the long and short side of the portfolio as higher quality, stable stocks with strong price momentum dominated other investment styles. The sharp “junk” rally in high-beta, lower quality stocks that dominated the first few months of the year gave way to a more measured sorting as the pace of overall market gains slowed. Gains were widespread, with all regions positive on the month. Defensives continue to lead cyclicals, with value-oriented stocks suffering as global growth slowed further. Our Credit Momentum strategy notched gains as high yield debt continued to hit new all-time highs, ignoring the potential warning signs of a flattening yield curve and a sharp drop in rates globally.

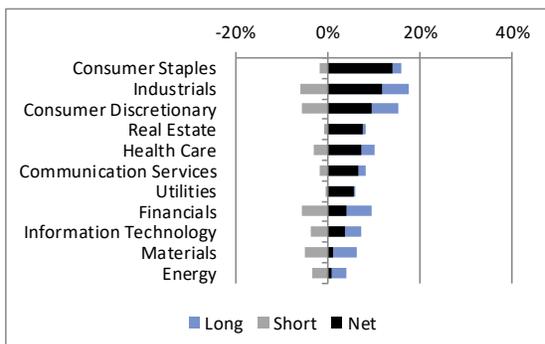

Global equities continued their rebound, closing out the best quarter in more than a decade. It appears the concerns that weighed on markets in Q4 of last year have been all but forgotten, however, there was a glimmer of fear re-emerging mid-month with investors spooked by the prospect of slowing global growth, causing recession fears to once again resurface. Much ink was spilled on the yield curve inversion that occurred during the month, along with the fact the market is now discounting a 75% chance of a rate cut in 2019. A few things are worth noting on the yield curve: an inversion at the short end has predicted 22 of the last 7 recessions (in other words not a great predictor by itself); recessions tend to occur on average 21 months from a more meaningful 2yr/10yr inversion (which hasn’t happened yet); and stocks on average peaked a year later and were 22% *higher* post the inversion. In short, its too early to de-risk portfolios on this indicator alone. The market has taken a decidedly defensive tone however, with leadership coming from large cap, dividend paying, high quality stocks. Cyclical value continues to suffer, and it’s fair to assume that until global economic growth stops slowing and begins to accelerate again, that may continue to be the case.

We’re not suggesting there aren’t any reasons to be concerned for equity markets, and we have held the view for some time that by all measures this market is late cycle. However, we recognize that over the last 10 years, it has by no means been a conventional bull market as the economy has experienced mediocre GDP growth and equity markets globally have experienced a number of substantial pullbacks. North American markets have come very close to experiencing two bear markets over the last few years alone. The wildcard remains the willingness of central banks to backstop risk assets and to offer up accommodative measures when called upon, even when it sometimes appears unnecessary. A recession, while inevitable at some point, is not a given in the near term, and frankly, an easy monetary policy melt-up remains a real risk.

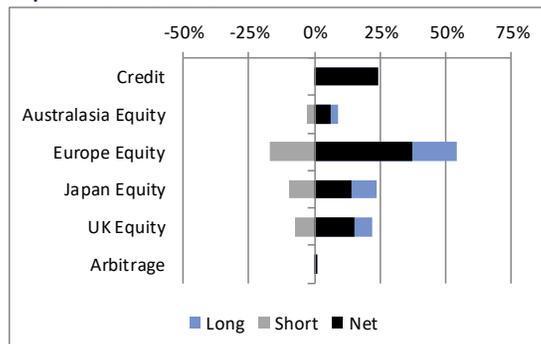

We enter April with the fund fully geared up, and with all markets we invest in currently in up trends. Despite exposures towards the high end of the fund’s targeted range, our market “beta” is less aggressively positioned as the fund carries a tilt towards more defensive sectors of the market, more so than we would typically expect during “risk on” periods. For now, we are constructively positioned and able to participate in any further move higher in equities, however, should markets roll over and go through an extended period of weakness, as always we will de-risk portfolios and lower overall market exposures as key levels are breached

**Fund Information**

The Fund constructs a long/short portfolio of International equities and credit by buying undervalued, rising, stable stocks and shorting overvalued, declining, volatile stocks. The Fund actively gears down risk in declining markets and tilts toward more defensive stocks and strategies to preserve capital. The Fund emphasizes a disciplined process of stock selection, risk control and liquidity. The Fund targets annual returns of 10-12% net of all fees.
