Commentary

The EHP Advantage International Fund Class "F" units declined -0.4% for the month of December. Losses on long positions were mostly offset by gains from shorts as only the most defensive, low volatility stocks outperformed during the market carnage. Our Credit Momentum strategy, which had rotated into long-dated U.S. treasuries in mid-November, paid off as the long bond spiked higher in a flight to safety move. While we believe that traditional bond allocations will be challenged to add much value in the long term, our view remains that during periods of extreme market stress they will continue to act as an excellent tactical diversifier.

It was an historic month in terms of the extreme market moves, with U.S. indices posting their worst December since 1931 amidst the depression. The MSCI EAFE Index outperformed the U.S., but was still down -5.8% on the month, and 15% from its highs. In a year that started off with an environment of low volatility, extreme bullishness, synchronized global growth and the strongest earnings gains in years, we ended the year with pretty much the opposite - a technically broken market, panicky behaviour, and extreme bearishness. Numerous markets around the world hit official "bear market" territory, down 20% or more from their respective highs, including the tech-heavy Nasdaq which posted a negative year after being up almost 20% as of October. There is a long list of "causes" for the sell-off, including a Fed tightening too far, a trade war that is starting to bite into earnings, decelerating global growth, and a number of more mechanical reasons including tax-loss selling and fund redemptions driven by some of the largest flows out of equity funds on record.

The key question looking forward is whether or not we are rolling into a recession. Bear markets that occur without a recession tend to average a 24% decline – not far from where we are today. Bear markets within a recession are much worse, falling 37% on average. The "soft" data, including PMIs, ISM, and sentiment indicators have fallen off a cliff in recent months, with the U.S. data catching up quickly to already weak global data. However the "hard" data including employment, industrial production, wage growth and housing starts remain supportive, showing deceleration, but nothing close to levels that typically lead recessions. Poor soft data can become self-fulfilling as a negative feedback loop takes hold; as an example there are signs that the riskiest parts of the credit market are freezing up with leveraged loans declining and junk debt deals getting shelved due to lack of demand. If we were forced to guess, we would favour a 2015/16 or 1998 scenario where growth slows but doesn't turn negative, but markets will absolutely remain volatile as investors weigh future scenarios, and each data point will take on increased importance.

We enter 2019 positioned similarly to the last few months with the fund at the low end of targeted risk. Periods like these, where markets suffer a substantial pullback, remind us of the merits of our gearing-down process and has allowed each of our funds to outperform during this downdraft. The goal of our process is to protect capital by sitting on the sidelines until markets re-assert themselves, at which point we will re-engage. Whether the rally that took hold in the last week of the year was a short-term bounce in a bigger decline, or the start of a turn higher, we will have to wait and see, however, for the time being we remain cautious until tactical indicators turn up and a more constructive trend emerges.

Fund Information

The Fund constructs a long/short portfolio of International equities and credit by buying undervalued, rising, stable stocks and shorting overvalued, declining, volatile stocks. The Fund actively gears down risk in declining markets and tilts toward more defensive stocks and strategies to preserve capital. The Fund emphasizes a disciplined process of stock selection, risk control and liquidity. The Fund targets annual returns of 10-12% net of all fees.
